**Mail Payment & order form to: OCNRC D 59 Waterfront Plaza Newport, VT 05855** TOTAL = \$

All roots are dipped in Terra-Sorb®, a non-toxic gel used to keep roots moist during transport and planting to improve water absorption and protection from heat-stress and drought. This product is not approved for certified organic operations. **check  if you DO NOT want trees with Terra-Sorb® Hydrogel**

# Solitary Bee Nesting Block Order Form

There are approximately 4,000 bee species native to the United States. 30% of native bees nest in wood tunnels. Solitary females create a line of brood cells in the tunnels and generally dies once her nest is complete. Offspring remain in the nest for about 11 months before emerging as adults. There is a loss of nesting sites in our changing, tidy landscaping.

## Should you get a Bee Nesting Block?

Installing a bee block on your property can boost local populations. Bee boxes do need tending to annually to maintain proper conditions in the tunnels. Suitable locations for safe occupancy are on a building or post mounted and ideally will meet the following site conditions:

- Sunny location, sheltered from worst weather direction
- Near flowers or garden area
- Eye-level or above

## Our Bee Blocks

These bee blocks are made possible through the District's partnership with **North Country Career Center (NCCC) Agricultural Sciences Department** students. All proceeds go to Orleans County Future Farmers of America.

Following Xerces Society recommendations, our unfinished covered bee blocks measure 12"x 4" x 6" with 5" deep 1/4" diameter tunnels with paper straws. They will come with detailed installation and maintenance instructions.

Number of bee blocks: \_\_\_\_\_ x \$25/block = \$\_\_\_\_\_ Total

*Please make checks out to Orleans County NRCD*

# Rain Barrel Order Form

## What is a Rain Barrel?

Barrels collect and store rain water from your roof to reduce flow volume and pollution to storm drains and surface waters.

**The Benefits:** Conserve & reuse water, recharge groundwater, provide irrigation, save money and energy, and protect watersheds through improved water quality.

**Siting:** Place under a downspout nearest to a water use area. Set on cinder blocks for gravity flow. Release to a non-eroding vegetative area. Consider volume of water from roof during a typical storm event. Example: 600 square feet of roof will generate more than 90 gallons of water during a 0.25-inch storm event.

## Rain Barrel Features:

- ◆ 60-Gallon, Repurposed, Food-Grade Plastic Barrel
- ◆ Approximately 40 inches tall x 24 inches wide
- ◆ Screw top lid with screen
- ◆ Brass threaded garden-hose spigot
- ◆ Not included: downspout elbow or garden hose
- ◆ You can paint the barrel with a fun design
- ◆ May connect two barrels together
